We're demobing Friday or Saturday hopefully. Still awaiting some lab results so we can dispose of staged soil on Property 2. I don't want to start getting it ready until we have results.

Not sure if it will pass TCLP, hope so 😊

Dear Fellow Team Members

You have been with me through one - or more – or all- of the operations on Property 1 at the Shiloh Church Road Site. You may have been here for excavation, or radiation

screening, or weighing and setting up windrows and segments, or mixing segments, or sampling segments, or moving segments, or T&D

As of last Friday, our team successfully disposed of all contaminated soil WHICH HAD PREVIOUSLY BEEN EXCAVATED from Property #1. The photos above are views from north to south and from south to north. (if you don't know what that means, then you weren't here very long 😊)

We are not finished as we still have to excavate, windrow, treat and dispose of 9E and other select areas of the Site, so no celebrations yet.

We are going to take a break from the Site, get past coronavirus, and hit the reset button for the additional work.

In the meantime, I want to share our progress and thank each one of you

Thank you and stay safe

Chris
